an active matrix liquid crystal display within the <u>display</u> housing and <u>connected to the display circuit, the liquid crystal display</u> including an array of at least 75,000 pixel electrodes, the array of pixel electrodes, having an active area of less than 100 mm²;

a [backlight] <u>light source</u> that illuminates the array of pixel electrodes; and

a lens positioned to receive an image formed on the active matrix liquid crystal display [and] <u>such</u> that <u>the lens</u> magnifies the image.

7.   (Amended) A docking system for a wireless telephone comprising:

a handheld housing having a plurality of control elements and a connection port that electrically connects a <u>display</u> circuit within the housing to the wireless telephone attached to the housing;

a display subhousing carried by the housing and moveable between a storage position and an operating position;

an active matrix liquid crystal display within the <u>display subhousing and</u> including an array of at least 75,000 pixel electrodes, the array of pixel electrodes having an active area of less than 100 mm², <u>the display being connected to the display circuit in the housing that receives image data from the wireless telephone;</u>

a <u>light emitting diode</u> [LED] light source that illuminates the array of pixel electrodes carried by the display subhousing; and

a lens carried by the display subhousing and positioned to [receive] <u>magnify</u> an image formed on the active matrix liquid crystal display [and that magnifies the image].

17.   (Amended) A docking system for a <u>wireless</u> telephone comprising:

a housing having a plurality of control elements and a connector port that electrically connects a <u>display</u> circuit within the housing to a <u>wireless</u> telephone attached to the housing;

a display subhousing module movable from a storage position to an operating position relative to the housing;

an active matrix liquid crystal display within the display subhousing and including an array of at least 300,000 pixel electrodes<u>, the display being connected to the display circuit such that image data received by the wireless telephone is displayed on the display;</u>
